

Patch 13.0 – Colormanagement source profiles

Intent

Patch 13.0 is meant to test the proper handling of PDF files that contain color managed objects. This patch uses device independent color definitions (namely ICCbased RGB and ICCbased CMYK), but no spot color definitions.

Testing guidelines

Test patches may be used in two ways:

- A single patch may be used to test the proper rendering of objects that are using ICC source profiles
- Patches may be grouped with other patches to test the whole of a workflow that will aggregate multiple files together, e.g. for partial page advertisements in a magazine.
