

Patch 16.1, 16.4 – Transparency Basic Blend Modes (ICCbased)

Intent

The intent of the patch is to check for correct rendering of Transparency Basic Blend Modes (Multiply, Screen, Overlay, etc.) for ICCbased objects. Each test patch element is constructed as follows:

Testing guidelines

This patch can be used in two ways:

- A single patch may be used to test a specific step in a workflow, such as a RIP.
- Patches may be grouped with other patches to test the whole of a workflow that will aggregate multiple files together, e.g. for partial page advertisements in a magazine.

Method of evaluation

Method 1

A clear X indicates the improper handling of a file.

Correct rendering of the patch, all tests passed. No clear X is showing.

Incorrect rendering of the patch, all tests have failed. Each X indicates an incorrectly rendered test.

ATTENTION!

When rendering this patch, please take the following considerations into account:

- A faint **X** is due to differences in the CMM and does **not indicate a failure**.

Example:

EXAMPLE

- A clearly visible **X** indicates that this blend mode is **not supported properly** which is **a failure**.

Example:

EXAMPLE

The same markers were added to the test files to indicate the caution.
