

GWG 20.5/20.6 – CMYK/RGB Image with ICC V4 Profile

Intent

The purpose of this patch is to test if the workflow can handle ICC V4 profiles (CMYK and RGB) as source color of an image:

Testing guidelines

The test patches may be used in two ways:

- A single patch may be used to test the support ICC V4 profiles in the workflow.
- Patches may be grouped with other patches on a page to test the whole of a workflow that will aggregate multiple files together, e.g. for partial page advertisements in a magazine.

Method of evaluation

If the image with the ICC V4 source profile is not rendered correctly you will either see a disturbed image or the image will not be displayed at all. In this case a big red cross which is placed behind the image will become visible. In some cases you may also get error messages from the application processing the PDF.

Patch Creation

This patch was created with Adobe InDesign CS6 and exported to PDF/X-4.
